

# The importance of HTML

HTML Essential Training

---

## Capítulo 1.

Lenguajes CORE del diseño WEB:

### HTML – CSS – JS

- **HTML:** Estructura esencial de la página
- **CSS:** Diseño de la página
- **JS:** Comportamiento de la página.

HTML: Es un lenguaje de marcado para el desarrollo de páginas de internet y brinda la estructura esencial de las mismas. (*Hypertext Markup Language*)

Los elementos en HTML representan las etiquetas y sus contenidos.

Existen estándares desarrollados por W3C y WHATWG.

## Capítulo 2

Hay siete tipos de contenidos

<https://www.w3.org/TR/html5/dom.html#kinds-of-content>

These categories are related as follows:

## Capítulo 3

¡BR = Line breaks!

### Definition lists

```
<dl>
  <dt><b>The Bold Tag</b></dt>
  <dd>The bold tag (&lang;b&rang;) is mean to represent a span of text
that you wish to set apart stylistically from the rest of the text without
inferring any type of special relevance or meaning. It was removed in XHTML
as being solely presentational, but added back to HTML5. As you would
expect, browsers typically bold this text.</dd>
  <dt><strong>The Strong Tag</strong></dt>
  <dd>By using the strong tag (&lang;strong&rang;) you are representing a
string of text as having strong importance. The text should be considered to
be more important than the text surrounding it. It is typically displayed as
bold.</dd>
  <dt><i>The Italic Tag</i></dt>
  <dd>Like the bold tag, the italic tag (&lang;i&rang;) represents a
string of text that is set apart stylistically from the text around it. No
particular meaning is attached to the text, rather it is rendered in
italics. Helpful for phrases, terms, or any text that is normally displayed
in italics.</dd>
  <dt><em>The Emphasis Tag</em></dt>
  <dd>The emphasis tag (&lang;em&rang;), or "em" tag, denotes text that is
emphasized more than the text around it. Although this tag is usually
rendered in italics, it shouldn't be used in place of the italics tag,
